AgriHeal — Video Demonstration Script

Complete Product Demonstration Walkthrough & Voice-Over Guide

Format: Screen Recording + Voice-Over
Target Duration: 4:30 Minutes
Platform: Progressive Web App (PWA)
Evaluation: MSME / Investors

This document provides the complete scene-by-scene script, on-screen user actions, spoken voice narration, and key technical talking points for recording an impactful demonstration video of the **AgriHeal** platform.

Scene-by-Scene Demonstration Guide

Scene 1: The Hook & Indian Agricultural Crisis **0:00 – 0:35 (35 sec)**

[SCREEN ACTION]

Start on the AgriHeal Welcome / Splash screen showcasing the AgriHeal brand logo, clean hero imagery, and tagline. Keep the cursor steady to establish a professional visual intro.

[SPOKEN VOICE-OVER]

"Every single year, Indian agriculture loses over ninety thousand crore rupees to preventable crop diseases, pest outbreaks, and unscientific farming practices. But the bigger tragedy is that eighty-six percent of our farmers are smallholders who cannot read complex, text-heavy apps in English, and thousands suffer from fatal pesticide poisoning simply because nobody taught them the right chemical dilution or safety precautions.

This is where **AGRIHEAL** *steps in. AgriHeal is an AI-powered, voice-first precision agriculture and farmer healthcare platform that converts complex agronomic science into simple, spoken local language guidance—accessible to any farmer, on any basic smartphone, without needing expensive hardware."*

Core Focus: Connects real national agronomic losses (ICAR statistics) with farmer health hazards, immediately positioning AgriHeal as the unified remedy.

Scene 2: Zero-Literacy Vernacular Onboarding **0:35 – 1:05 (30 sec)**

[SCREEN ACTION]

Click on **LANGUAGE SELECTION** (displaying Telugu, Hindi, Tamil, English). Select a regional language or English, quickly progress through **PROFILE SETUP** (select crop: *Paddy/Cotton/Wheat*, enter farm size: *3 Acres*), and land smoothly on the **FARMER DASHBOARD**.

[SPOKEN VOICE-OVER]

"Let's experience how a farmer uses AgriHeal.

Right from the start, AgriHeal breaks the digital barrier with multi-language *vernacular onboarding. Whether a farmer speaks Telugu, Hindi, Tamil, or English, the entire platform instantly adapts.*

Once the farmer logs their basic plot details—such as crop type and acreage—they are greeted by an intuitive, clutter-free dashboard designed with clear visual cards, high-contrast indicators, and zero confusing technical jargon.”

Core Focus: Demonstrates zero-friction accessibility and rapid 30-second setup tailored for non-tech-savvy rural users.

Scene 3: Vani Voice AI in Action **1:05 – 1:45 (40 sec)**

[SCREEN ACTION]

Highlight and tap the floating **VANI VOICE WIDGET**. Show the active listening waveform animation. Trigger a query or ambient greeting (*“Namaste! I am Vani...”*), showing Vani responding with natural spoken audio and an on-screen advisory card.

[SPOKEN VOICE-OVER]

“Now, meet **VANI***—our real-time conversational AI voice assistant.*

A farmer standing in the middle of a muddy field cannot type queries into a search bar. With Vani, they don't have to. Powered by real-time voice activity detection and ultra-low-latency speech synthesis, the farmer simply taps the microphone and speaks naturally in their native dialect—asking questions about weather risks, yellowing leaves, or market prices.

Vani understands the context, reasons with agricultural intelligence, and speaks back in clear, compassionate audio. It completely eliminates the literacy barrier, turning the phone into a 24/7 personal digital agronomist.”

Core Focus: Technical differentiation via LiveKit WebRTC, Silero Voice Activity Detection, and Cartesia Neural TTS voice synthesis.

Scene 4: AgriShield — AI Crop Leaf Diagnostics **1:45 – 2:25 (40 sec)**

[SCREEN ACTION]

Navigate to **CROP MANAGEMENT → AGRISHIELD**. Tap **UPLOAD LEAF PHOTO / CAMERA**. Select a diseased leaf photo. Show the rapid analysis loader (<3 seconds) and reveal the diagnostic breakdown: disease identity, severity score, biological treatments, and chemical options.

[SPOKEN VOICE-OVER]

“When disease strikes a crop, delay means devastation. Here we open **AGRISHIELD***, our AI computer-vision diagnostic engine.*

The farmer simply takes a photo of an affected leaf directly with their phone camera. Within three seconds, our deep learning vision pipeline inspects the leaf tissue, identifies the specific disease—such as Leaf Blight—and calculates the severity level.

Notice that AgriShield doesn't just name the problem; it prioritizes eco-friendly biological remedies first, followed by scientifically validated curative measures to arrest the outbreak immediately.”

Core Focus: Rapid Computer Vision pathology detection, instant remediation, and prioritizing organic/biological cures over synthetic chemicals.

Scene 5: ToxiGuard — Chemical Safety & Farmer Health **2:25 – 3:05 (40 sec)**

[SCREEN ACTION]

Click through to **TOXIGUARD**. Highlight the WHO Toxicity Color Band (Yellow/Blue/Green hazard rating), enter a 15-liter knapsack sprayer tank capacity in the **DILUTION CALCULATOR**, and showcase the required PPE gear checklist and Pre-Harvest Interval (PHI) count.

[SPOKEN VOICE-OVER]

“This brings us to one of AgriHeal's most critical innovations: **TOXIGUARD***.*

Most commercial apps tell farmers which pesticide to buy, but none tell them how to spray safely. Over-dilution damages soil; under-dilution fails; and inhaling toxic fumes causes severe illness.

ToxiGuard actively protects farmer lives. It classifies the chemical into standardized WHO toxicity color bands, computes the **EXACT MILLILITER-TO-WATER DILUTION** *based on the farmer's knapsack sprayer tank size, displays mandatory PPE safety gear, and warns them about the pre-harvest withholding interval to ensure food safety for consumers.”*

Core Focus: Primary winning differentiator! Active occupational safety, PPE checklists, and precise tank dilution calculation.

Scene 6: Precision Agriculture — SatWater & Crop Nutrition **3:05 – 3:45 (40 sec)**

[SCREEN ACTION]

Open **SATWATERMONITOR** (highlight soil moisture percentage, safe status, and irrigation recommendation). Transition to **CROP NUTRITION / FERTILIZER CALCULATOR** (select crop, show N-P-K nutrient status, and display stage-wise Urea/DAP dosage).

[SPOKEN VOICE-OVER]

“Next, AgriHeal addresses resource efficiency.

Here is **SATWATERMONITOR***. By analyzing remote satellite moisture indicators and localized weather forecasts, it informs the farmer whether irrigation is needed today. This prevents over-watering, saving thousands of liters of groundwater and diesel pumping costs.*

Alongside water, our **CROP NUTRITION** *module eliminates fertilizer guesswork. Instead of dumping random bags of Urea or DAP, the farmer selects their crop and growth stage. AgriHeal analyzes the N-P-K nutrient requirements and specifies the precise kilogram dosage needed per hectare, protecting soil biology while maximizing yield.”*

Core Focus: Satellite remote sensing indices, preventing groundwater over-extraction, and scientific stage-wise N-P-K fertilizer optimization.

Scene 7: Farm Financial Ledger, Livestock & Schemes **3:45 – 4:15 (30 sec)**

[SCREEN ACTION]

Glance through **CROPFARMEXPENSES** (income vs. expense ledger), **LIVESTOCK MONITOR** (cattle health triage and vaccination calendar), and **SCHEMES CENTER** (government subsidy matching).

[SPOKEN VOICE-OVER]

“AgriHeal is a complete rural ecosystem:

- *The* **FARM LEDGER** *lets farmers log daily seed, labor, and fertilizer expenses to forecast their final harvest profits.*
- *The* **LIVESTOCK MONITOR** *extends care to rural cattle and dairy animals with disease symptom triage and vaccination reminders.*
- *And through our* **SCHEMES CENTER***, farmers discover government subsidies, crop insurance schemes, and welfare benefits they are entitled to—ensuring financial security.”*

Core Focus: Complete farm operations coverage: financials, animal husbandry, and direct welfare eligibility access.

Scene 8: Technology Foundation & Closing Vision **4:15 – 4:45 (30 sec)**

[SCREEN ACTION]

Return to the Farmer Dashboard or present the full-screen **ARCHITECTURE FLOWCHART** graphic, finishing on the AgriHeal logo with team/mentor credentials.

[SPOKEN VOICE-OVER]

“Under the hood, AgriHeal is built as a zero-hardware, ultra-lightweight Progressive Web Application using React, Vite, and Tailwind on the frontend, backed by a resilient FastAPI and Supabase cloud architecture with LiveKit WebRTC audio streaming. It functions smoothly even on low-bandwidth rural 3G and 4G connections.

By merging instant AI vision diagnostics with life-saving chemical safety and vernacular voice AI, AgriHeal doesn't just optimize farms—it heals agricultural livelihoods and protects farmer health.

Thank you for watching the AgriHeal demonstration.”

Core Focus: Scalable cloud infrastructure, zero-hardware PWA, and a memorable, mission-driven closing statement.

Pre-Recording Checklist & Demo Setup

Parameter	**Recommended Configuration**
Browser Zoom	Set to 100% or 110% on Google Chrome / Safari for optimal text sharpness and button card padding.
Screen Resolution	1920 × 1080 (16:9 Full HD) or Responsive Mobile Viewport (iPhone 14 Pro / Pixel 7).
Demo Assets	Have 1 high-resolution diseased crop leaf photo on Desktop ready for instant upload into AgriShield.
Pacing & Audio	Speak with warmth, clarity, and authority. Allow screen transitions to settle for 1 second before narrating.

Demonstration Guide
